## ELECTRIC REAR VIEW MIRROR

AUTOMATION, COMFORT AND STYLE!

➤ TILT-DOWN

➤ SIDE MIRROR FOLDING

➤ WINDOW LIFTER

➤ SUNROOF

## What is PARK?

The PARK Line was developed to offer functions of automation, comfort and style for the original electric rear view mirrors. Available in Plug and Play models and Universal models (PARK 2). The PARK Line has as main functions: **Tilt-Down and Side Mirror Folding System.**

The PARK line also offers integrated functions in some of its modules, such as: The closing of power windows and sunroofs.

\*Check out the functions available for your car.

# AVAILABLE MODELS

Check below the available models and functions:

MODEL	FUNCTIONS
PARK 1	Tilt-Down
PARK 2	Car Side Mirror Folding
PARK 3	Tilt-Down + Car Side Mirror Folding
PARK 4	Lifter + Tilt-Down OR Lifter + Car Side Mirror Folding
PARK 5	Lifter + Tilt-Down + Car Side Mirror Folding
PARK 6	Lifter + Tilt-Down + Car Side Mirror Folding + Sunroof

The **PARK 4**, **PARK 5** e **PARK 6** versions also automatically close the original electric power windows through the original remote control.

# FUNCTIONS

**TILT-DOWN:** This Function assists the driver in maneuvers using reverse gear. The Tilt Down prevents damage to the wheels, allows the driver to have a better range of vision and prevents side collisions. It includes Tury exclusive function that allows you to program the car side mirror with the desired return time to the original position when disengage the reverse. It can operate in automatic or semi-automatic modes, selected by users. Available to vehicles with automatic or manual gears.

# FUNCTIONS

**CAR SIDE MIRROR FOLDING:** The system can fold and unfold the side mirror automatically through the original remote control. This function is only available to vehicles that have this mechanism (folding system) as original from automakers. Folding your side-mirrors eliminates and lessens that buffer zone of safety between your side panels and pedestrians passing by your parked car, or that vehicle parking into that vacant slot next to your ride.

**SUNROOF:** Few vehicles have automatic closing of the sunroof. In addition to the safety issue, in the event of rain, failure to close the sunroof can cause serious damage to the vehicle, such as compromising the electrical system, and the loss of seats and carpets. The TURY products allow automatic closing (Some applications also allow opening) of sunroofs and ragtops through the original remote control. TURY's sunroof function was developed to avoid the Turn Back effect (Involuntary rear opening of the sunroofs through the original remote control).

**LIFTER:** This function allows the automatic closing of the four electric power windows through the original remote control. The function preserves the Anti-Pinch Safety Feature.
